SIEMENS

FAQ • 06/2014

Software Update from PCS 7 V8.0 SP1 Upd1 to PCS 7 V8.0 SP2

SIMATIC PCS 7

http://support.automation.siemens.com/WW/view/en/39980937

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, equipment and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered. For more information about industrial security, visit http://www.siemens.com/industrialsecurity.

To stay informed about product updates as they occur, sign up for a product-specific newsletter. For more information, visit http://support.automation.siemens.com.

Table of contents

1 Preparation

Proceed as shown in the table below to prepare for upgrading.

Table 1-1

Step	Procedure
1.	**Backup** We recommend making a backup of the partitions of all the computers concerned before starting this task. You can use the "SIMATIC Image & Partition Creator" software for this. http://support.automation.siemens.com/WW/view/en/65976394
2.	**Save project** Save the project and own libraries before starting the update.
3.	**Save licenses** Updating does not delete the licenses installed on the system. Save all existing licenses before making a complete reinstallation.
4.	**Save PDM data** Save the installation files of the PDM devices. Updating of PCS 7 removes the device catalog of SIMATIC PDM. You must reinstall the device descriptions after updating.
5.	**Disable WinCC Autostart** If being used, you must disable the "WinCC Autostart" function before updating the software. • OS client: "Start > SIMATIC > WinCC > Autostart" • OS server: "Start > SIMATIC > WinCC > Autostart" or "Start > SIMATIC > SIMATIC Net > Set PC station > Applications > Autostart" After disabling WinCC Autostart, restart the PC station.
6.	**Remove the password protection for projects** Any password protection must be disabled before updating the software.

2 Starting the PCS 7 Update Installation

NOTICE	**Delta loading**
	The AS projects can be delta loaded as long as no blocks (FB, FC) with interface changes have been used in CFC. Please note in chapter 6 the “List of Changed Blocks”.

NOTICE	**Readme**
	Before you install PCS 7 V8.0 SP2, read the instructions concerning system and software requirements in the PCS 7 Readme.

NOTE **Further information**

More information about updating PCS 7 is available in the manuals below.

- "PCS 7 Software Updates With Utilization Of New Functions"
- "PCS 7 Software Updates Without Utilization Of New Functions"

Table 2-1

Step	Procedure
1.	**Install the PCS 7 update** Start the basic setup of PCS 7 V8.0 SP2 and follow the instructions.

3 Updating the Project

3.1 Updating Blocks

With Master Data Library

Proceed as follows.

Table 3-1

Step	Procedure
1.	**Copy blocks** Copy all the blocks used in the project from the new libraries (PCS 7 APL V8.0 SP2 Upd2, for example) into the master data library. **Note** When copying the blocks a window will appear which shows the message if you want to overwrite the blocks. In this window you can use the button "Adjust Attributes…" to show the different attribute values in the source and the destination and make your project specific changes.
2.	**Update block types** Select the block folder in the master data library of the multiproject and then select the menu command "Options > Charts > Update block types". In the dialog that opens you can select or deselect all the programs (and sample solutions). Click the "Next" button. All the block types are displayed for selection/deselection. Select the blocks for system updating from the "List of changed system blocks". Click the "Finish" button.

This procedure replaces all the block types in the block containers of the project and does a block type import in all the chart containers of the project.

Without Master Data Library

Proceed as follows for each library used.

Table 3-2

Step	Procedure
1.	**Open the library** Open the new library (PCS 7 APL V8.0 SP2 Upd2, for example) from which you use blocks (PCS 7 APL V8.0 SP2 Upd1, for example) in your projects.
2.	**Update block types** Select the blocks used and then select the menu command "Options > Charts > Update block types". In the dialog that opens you can select or deselect all the programs (and sample solutions). Click the "Next" button. All the block types are displayed for selection/deselection. Select the blocks for system updating from the "List of changed system blocks". Click the "Finish" button. There then follows a query as to whether there is to be format conversion of the CFC charts to the current version. Acknowledge the dialog with "Yes". **Note** If you do not update the block types, because you want to continue using the block versions already configured, you can convert the format of the CFC charts as follows: • Open a CFC chart. • Move a block. • Acknowledge the dialog for converting the CFC charts.

This procedure replaces all the block types in the block containers of the project and does a block type import in all the chart containers of the project.

3.2 Compiling Configuration Data of the AS

Execute the "Save and Compile" function in the HW Config and in NetPro for all ASs.

3.3 Compiling Charts of the S7 Programs

Proceed as follows.

Table 3-3

Step	Procedure
1.	**Compile S7 program** Compile the program of each AS with these settings: • Changes only • Generate module drivers **Note** Maybe you can compile the AS program only with the option „Entire program”. However, this does not affect the online delta loading capability. The AS projects can be delta loaded as long as no blocks (FB, FC) with interface changes have been used in CFC. The blocks with interface changes are given in chapter 6-List of Changed Blocks.

3.4 Compiling Configuration Data of the OS

Execute the "Save and Compile" function in the HW Config and in NetPro for all PC stations.

3.5 Updating OS Projects

Open the projects of all the OS servers and OS single stations and OS clients on the ES one after the other and proceed as follows.

Table 3-4

Step	Procedure
1.	**Generate Header** Open the Global Script C editor and execute the menu command “Options > Regenerate Header”
2.	**Start the OS project editor** Start the OS project editor with the option "Complete Configuration (loss of support for online delta loading capability)" in the "General" tab. **Note** If you are using the template pictures for the APL block icons of PCS 7 V7.1 SP3, please refer to the software update manuals.

3.6 Compiling the OS Server/OS Single Stations

Proceed as follows.

Table 3-5

Step	Procedure
1.	**Compile the OS Server/OS Single Stations** Start compilation for all OS servers and all OS single stations with these options: • Tags and messages • SFC Visualization • Picture Tree • With interconnection partner (SFC option) • Complete compilation with overall reset

3.7 Loading Target Systems

Update the PCS 7 software on the PC stations concerned before loading the OS. Perform loading in the following order.

Table 3-6

Step	Procedure
1.	**OS Server/OS Single Stations** • Start overall loading of all OS servers/OS single stations. • Start the Runtime of the OS servers/OS single stations.
2.	**OS clients** • Start overall loading of all OS clients. • Start the OS Runtime of the clients.
3.	**AS program** Start delta loading of the S7 programs of all ASs. **Note** The AS projects can be delta loaded as long as no blocks (FB, FC) with interface changes have been used in CFC. The blocks with interface changes are given in chapter 6-List of Changed Blocks.

NOTE Sequencers of SFC charts are not stopped during the software update as long as no changes have been made in the sequencers concerned.

4 Updating Redundant Systems in Runtime

Proceed as follows to update redundant systems.

Table 4-1

Step	Procedure
1.	Update the standby OS servers.
2.	Update the OS clients that are connected to the standby OS server (via preferred server).
3.	Do a complete download of the OS projects to the standby servers and the OS clients.
4.	Start the standby OS servers and OS clients. -> Wait for the redundancy synchronization.
5.	Download the control program into the AS.
6.	Update the master OS servers.
7.	Update the OS clients that are connected to the master OS server (via preferred server).
8.	Do a complete download of the OS projects to the standby servers and the OS clients.
9.	Start the master OS servers and OS clients. -> Wait for the redundancy synchronization.

NOTE More information about updating redundant systems is available in the "Fault-tolerant Process Control Systems" manual, in the "Instructions for updating a redundant OS in runtime" section.

5 Options

Table 5-1

Option	Description
Route Control	Start the "Route Control Wizard" in projects with Route Control. Then run through the "ToDos" displayed in the log files of the "Route Control Wizard". **Note** More information about the RC library is available in these documents: "SIMATIC Route Control – Readme" and "SIMATIC Route Control – What is new".
SIMATIC BATCH	Regenerate and repropagate the "BATCH types" and group all the batch instances together. Then reload all the components. Execute the "Transfer messages" function. In this way, all the batch message texts are transferred to the OS project. Then you load the OS. Execute the "PCell update / Update plant data" function.
Web option	Web servers are to be considered as OS clients. You must also start the "Web View Publisher" and the "Web Configurator". When you restart the Internet Explorer on the web clients, you are prompted to install an update of the web client. You can fetch the installation files from the web server. After installing the web client, update the plugins.
CAS	Pay attention to the following points when using a CAS (Central Archive Server) in you plant: • The CAS is the first computer to be disabled and the first to be restarted. • You disable the CAS just by removing the network release of the archive folder "AchiveDir" so that OS servers no longer relocate archive segments. • The CAS failure time must not exceed the shortest circular log time of the OS servers. • You must disconnect any connected backup databases from the CAS before updating the software. • You can reconnect the disconnected databases after the software update. Redundant CASs can be updated in parallel.
Process Historian	Refer to the "Readme" and the PH manuals for updating the Process Historian.

6 List of Changed Blocks

The table in this section lists all the changed blocks compared with PCS 7 V8.0 SP1 Upd1. The blocks are marked as follows in the "Supports delta loading" column:

Table 6-1

Symbol	Description
✓	The changes in these blocks do not affect the interface. You can load the blocks without stopping the CPU.
✓	The interfaces of these blocks have been changed. You can load the blocks only by stopping the CPU.
New!	New blocks. These blocks are not available in the older versions of the library.

The "CFC Library" and "SFC Library" show no changes compared with PCS 7 V8.0 SP1 Upd1 and are therefore not listed explicitly.

More information about the libraries is available in the associated "Readme".

Notice	**Even if you have used PCS 7 V8.0 SP1 Upd1 beforehand, there might still be older versions of blocks in your automation program. In this case you must find out yourself whether you can do a software update without CPU STOP.**

6.1 PCS 7 Advanced Process Library V8 SP2 Upd2

Tabelle 6-2

Library	Block no.	Block name	Version	Supports delta loading
PCS 7 AP Library V8.0 SP2 Upd2	FB1803	CntOhSc	2.2	✓
	FB1805	ConPerMon	2.1	✓
	FB1806	CountScL	2.1	✓
	FB1818	FmCont	7.2	✓
	FB1819	FmTemp	7.2	✓
	FB1830	PIDConS	2.2	✓
	FB1845	MonAnL	2.1	✓
	FB1847	MonDi08	2.1	✓
	FB1848	MonDiL	2.2	✓
	FB1850	MotL	2.2	✓
	FB1851	MotRevL	2.2	✓
	FB1854	MotSpdCL	2.2	✓

Library	Block no.	Block name	Version	Supports delta loading
	FB1856	MotSpdL	2.2	✓
	FB1864	CountOh	2.1	✓
	FB1865	OpAnL	2.2	✓
	FB1874	PIDConL	2.2	✓
	FB1875	PIDConR	2.2	✓
	FB1878	PIDStepL	2.2	✓
	FB1882	RateLim	2.1	✓
	FB1883	Ratio	2.1	✓
	FB1896	VlvAnL	2.2	✓
	FB1900	VlvMotL	2.2	✓
	FB1903	AV	2.1	✓
	FB1906	TotalL	2.1	✓
	FB1910	MotS	2.2	✓
	FB1912	MonAnS	2.1	✓
	FB1913	MonDiS	2.2	✓
	FB1914	ShrdResS	2.1	✓
	FB1915	OpAnS	2.1	✓

NOTE The new PCS 7 Advanced Process Library replaces the existing library when you update PCS 7.

6.2 PCS 7 Basis Library V8 SP1 Upd4

Tabelle 6-3

Library	Block no.	Block name	Version	Supports delta loading
PCS 7 BasisLibrary V8.0 SP1 Upd4	FB82	SUBNET_PN	7.2	✓
	FB83	OR_M_8C	7.2	✓
	FB84	OR_M_16C	7.2	✓
	FB85	OR_M_32C	7.2	✓
	FB89	PS	7.1	✓
	FB90	RACK_PN	7.2	✓
	FB91	MOD_1	7.2	✓
	FB92	MOD_2	7.2	✓
